EDUCATION

University of California, San Diego | San Diego, CA

B.S. in Computer Science

June 2027

GPA: 3.9

SKILLS

Languages: C/C++, Python, JavaScript/TypeScript, Java, SQL, R, HTML/CSS

Tools/Frameworks: Node.js, React, Next.js, Express, TailwindCSS, FastAPI, Streamlit, Git, REST APIs, AWS

Databases: SQLite, PostgreSQL, Supabase, MongoDB

Data Science & ML: NumPy, Pandas, Matplotlib, PyTorch, TensorFlow

EXPERIENCE

Genentech | South San Francisco, CA

Jun. 2025 - Sep. 2025

Software Engineering Intern

- Spearheaded development of custom web applications to support the external manufacturing team, delivering technical solutions to business bottlenecks
- Built AI agents that ingested contracts, financial invoices, and spreadsheets to answer user queries, automating compliance review and data analysis, reducing manual effort, and enabling quicker decision-making
- Identified, quantified, and mitigated 10+ operational risks in the supply chain, avoiding a combined estimated potential loss of \$30 million; presented findings and recommendations to core leadership team

Falcon Critical Care Transport | San Jose, CA

Feb. 2024 - Sep. 2025

Emergency Medical Technician

- Dedicated 1,500+ hours delivering emergency and critical care on the ambulance, performing hands-on patient assessments, administering life-saving treatments, and coordinating time-critical transports
- Collaborated effectively with fellow healthcare professionals under high-pressure environments to streamline transfer of care process
- Developed full-stack application dashboard using the MERN stack to track medical supply inventory, supporting patient care efforts by 50+ EMTs and nurses at Falcon Ambulance's Santa Clara base

Infineon Technologies | San Jose, CA

Sep. 2024 - Dec. 2024

Project Lead

- Directed a cross-functional team of fellow engineering students to build, train, and deploy an AI voice authentication model leveraging Infineon's microcontrollers, model training platform, and software development tools
- Trained and fine-tuned voice detection model on 2,000+ voice samples across multiple environments, achieving a 93% validation accuracy

PROJECTS

[FallWatch](#) – 2nd Place, LIVE AI Hackathon (MedTech) | Sagemaker, EC2, S3, Streamlit, PyTorch, OpenCV

November 2025

- Developed a real-time patient monitoring system on AWS by fine-tuning a YOLOv8 model and integrating a cloud-deployed pipeline with a live web dashboard for continuous multi-room monitoring and alerts

[TrialSync](#) – CalHacks | Next.js, TailwindCSS, Supabase, Claude API

October 2025

- Developed a clinical trial matching engine and recruiter dashboard to accelerate patient recruitment process by utilizing Livekit's AI agent SDK, ClinicalTrials.gov API integration, and automated email notifications via Nodemailer

Deviation Writing Tool | HTML/CSS, Python, FastAPI, Streamlit, Gemini API

August 2025

- Deployed an internal web application actively being used by 10+ site managers overseeing 30+ of Genentech's contract manufacturing organizations, reducing average deviation report writing time by ~70%

VoiceVault | C, Arduino, Raspberry Pi, DEEPCRAFT™

December 2024

- Built an AI-powered jewelry box using multi-factor voice and passphrase authentication, achieving enhanced security by deploying a custom-trained model using Infineon's PSoC™ 6 board and DEEPCRAFT™ model-training platform
